	Connecting to DataScan VPN	01

KB Category:	Network Operations		
Author:	Alvis Q. Bajal	Date:	June 12, 2019

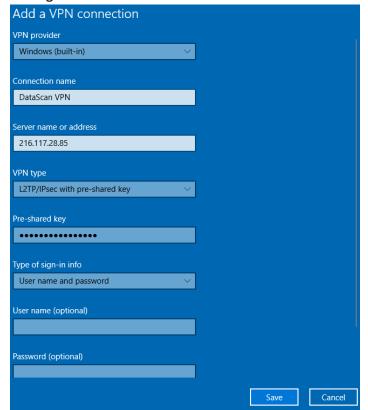

Problem Description:	-
Symptoms and Cause of the	-
issue:	

Procedures:

- I. WORKSTATION CONFIGURATION (DATASCAN)
 - 1. Login to DataScan workstation.
 - 2. Click Windows and search for "VPN". Open the Windows built-in VPN app.

3. Once opened, click "Add a VPN Connection", then fill out the text boxes with the following.

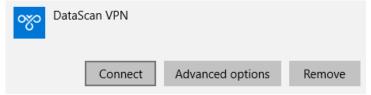

Click the check box – Remember my sign-in info then click Save.

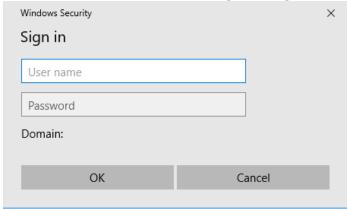

Repeat the steps for another DataScan VPN IP of 216.117.3.151 and name it "DataScan VPN 2".

VPN Pre-Shared Key: 1H*vomM91#dHB8gA

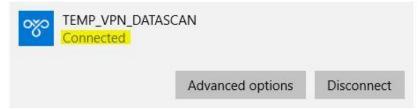

4. Once the VPN settings are added, connect to the DataScan VPN. Click Connect.

Once prompted after clicking Connect, enter the DataScan agent VPN credentials, then click OK. (coordinate with the agent to login their account)

5. Once connected, the connected VPN will look like this:

Effectivity:

August 1, 2017
